Speaker Cables

Meticulously Designed to Minimize Noise and Distortion

Do No Harm: The Four Elements Today

AudioQuest's Four Elements are always applied in the most thoughtful, effective ways to offer the best performance for the money—at all price points. While our implementation of these techniques has evolved over the years, our guiding principle remains the same: *Do No Harm.*

Solid Conductors

Strand interaction remains the biggest potential source of distortion in cables. Solid Conductors are the aspirational ideal and most complete solution to this problem. However, thoughtfully arranged multi-conductor geometries such as concentric windings are used to create our Semi-Solid Conductor technologies. These avoid many strand-distortion mechanisms and are in their own right ideal in a growing number of applications.

High-Purity Metal

Higher-purity conductor metals with smoother surfaces and internal crystal structures greatly reduce noise and distortion. Carefully finessed mixes of metals and conductor sizes can be effectively used to define a cable's *Sonic Signature*—a cost-effective technique for high-value, high-performance models.

Noise-Dissipation

Unwanted Radio-Frequency (RF) noise is and has always been picked up and induced into cable. This contamination ultimately masks and distorts critical portions of the audio/video signal. As this distortion-causing (parasitic) RF signal is more present today than at any previous time in history, we must depend on a wider arsenal of Noise-Dissipation technologies:

- Directionally Controlled conductors minimize high-frequency noise by "directing" or draining it away from the most vulnerable circuits.
- ZERO Technology (No Characteristic Impedance) applies Ultra-Linear Noise-Dissipation across the widest range of frequencies possible. It also enables uncompressed transient current transfer for AC power and loudspeaker/power amplifier applications.
- RF/ND-Tech (Patented Radio-Frequency Ground-Noise Dissipation) minimizes circuit misbehavior by cancelling induced RF noise.
- Tried-and-true DBS has evolved to include RF-Noise Traps that further reduce dielectric distortion and induced noise.

Dielectric

Insulation is necessary between conductors to minimize signal interaction and electrical shorts. The ideal is virtually no dielectric interaction (such as is achieved with our ZERO Technology). However, by optimizing the dielectric material between signal conductors, this distortion is greatly minimized.

Mythical Creature & Folk Hero Termination Options: Bananas or Spades?

Amplifier-End Connector:

Choice of 1000 Series Multi-Spade, Banana, U-Spade, or V-Spade (Silver only)

Insulated (compliant) binding posts may not allow for 2 sets of connectors.

Often, the choice between terminating speaker cables with spade lugs or banana plugs will come down to personal preference. However, today's EU-compliant isolated binding posts are being used on more power amplifiers than ever before. This sometimes makes it difficult, if not impossible, to use a banana connector. Further, given the girth and weight of our Mythical Creature Series speaker cables, a spade may be better capable of fully supporting the cable. This is particularly a concern with binding posts that do not allow a banana connector to fully seat into the post.

Further, the EU-compliant posts will neither accept our V-Spade nor allow our Multi-Spade to be fully seated. For these applications (or when you're not certain), **we highly recommend the U-Spade**, as it can accommodate any binding post. The V-Spade is a specialty spade connector that works well with large wingnut binding posts (such as the Mundorf), as it allows extra clearance.

Multi-Spade Dimensions (mm)

Speaker-End Connector:

Choice of 1000-Series Spade or Banana (Silver only)

Here we typically recommend the U-Spade or banana connector. However, even though there is less weight and pressure on this side of the cable (particularly for Bi-Wire sets), it is nevertheless important to note the binding post's design. If a banana connector cannot seat all the way into the binding post, we recommend one of our spade connectors.

Level-X Noise-Dissipation "pulls" RF Noise out of the cable, preventing noise from capacitively coupling to the audio conductors—thereby preventing audio-circuit misbehavior.

72v Dielectric-Bias System (DBS)
AudioQuest's multi-patented DBS creates a strong, stable electrostatic field which saturates and polarizes (organizes) the molecules of the insulation. This minimizes the nonlinear time delays, resulting in clearer sound emerging from a "blacker" background.
